

TWIST-LOCK PIVOT

Helpful Application Tip

Follow the steps in order

1. Having trouble with your CS[®]5 Twist-Lock Pivot rolling to one side or the other on those smaller gaged wires?
2. Place a small piece of orthodontic brace wax on the occlusal/incisal edge for the upper and gingival side for the lower when working on a patient. This wax can help to hold the CS[®]5 Twist-Lock Pivot in place while you assemble the remaining parts.
3. The wax will hold the CS[®]5 Twist-Lock Pivot in place while you use the Magnetic Allen Pencil to tighten the screw that holds the CS[®] spring in place.
4. Once you have completed your CS[®]5 assembly, you can remove the orthodontic brace wax with a scaler.
